

Coravin Screw Caps

Description

Coravin is the magical contraption that allows you to draw wine from a bottle without opening the cork. This way you can pour limited portion of wine without worrying that the balance will go bad. Certainly an oenological boon, is it not ?

However, can Coravin be used for screw cap wine bottles as well ?

To the delight of wine lovers, it does (However, this innovation is only available in Australia and new Zealand for the moment)

How Coravin Works for Screwcaps

- 1 Grab your favourite bottle of expensive wine that's sealed with a screwcap
- 2 Remove and discard existing screwcap
- 3 Immediately replace with Coravin Screw Cap
- 4 Push the hollow needle of the Coravin System through Coravin Screw Cap
- 5 Continue to use Coravin as if it was bottled with a cork.

After pouring, remove the needle, and the Coravin Screw Cap will re-seal to protect the wine from oxidation.
